PROFILE

Production SRE with 4 years operating high-availability distributed infrastructure across regulated healthcare, crypto, and multi-protocol systems. Moving into AI infrastructure — bringing Kubernetes reliability, observability, and cost-aware platform operations to the compute and serving layers AI workloads depend on.

EXPERIENCE

Site Reliability Engineer — Kiln Jun 2024 – Jan 2026

- Operated high-availability distributed infrastructure securing $8B+ in digital assets across 40+ production networks
- Integrated 10+ distributed protocols into hybrid-cloud environments with reliability and security guarantees
- Designed and maintained Terraform IaC and Helm charts across multi-environment Kubernetes clusters
- Built and optimized CI/CD pipelines to improve deployment safety and reproducibility
- Led production hardening, risk mitigation, and cross-team alignment on infrastructure constraints
- Translated infrastructure constraints into scalable architectural decisions with engineering and product teams

Site Reliability Engineer — Cometh Feb 2023 – Oct 2023

- Managed multi-zone Kubernetes clusters on GCP in production, deploying services with Helm charts
- Reduced CI build times by 60% through pipeline optimization and container standardization
- Improved system observability (Prometheus, Grafana, OpenTelemetry, ELK) and reduced MTTR
- Optimized infrastructure architecture, reducing cloud costs by 25%
- Led ISO 27001 security implementation and incident response processes

DevOps Engineer — Docaposte Jun 2022 – Feb 2023

- Recovered and stabilized critical Kubernetes clusters in a regulated healthcare environment
- Standardized and hardened infrastructure deployed via Ansible
- Improved CI/CD reliability and deployment safety in HDS-certified systems
- Managed Linux systems and distributed storage in production

Junior DevOps Engineer — Bitgen Dec 2021 – Apr 2022

- Containerized and deployed Ethereum services on Kubernetes
- Improved security and availability of blockchain infrastructure
- Contributed to technical documentation and developer content

INDEPENDENT WORK

2026 – present

- Product-idea proofs of concept in domain-specific AI assistance and orchestration
- Independent research in history and linguistics, largely AI-assisted prosopography

SKILLS & TECHNOLOGIES

Kubernetes · Terraform · Helm · GCP · Linux · Docker · CI/CD · GitOps · Prometheus · Grafana · OpenTelemetry · ELK · PostgreSQL

Distributed Systems · High Availability · Scalability · Performance Tuning · Capacity Planning · Cost Optimization · SecOps · ISO 27001 · HDS · GPU exposure

CORE COMPETENCIES

Infrastructure Strategy & Systems Thinking · Translating Infrastructure Constraints to Product & Business Teams · Cross-Functional Collaboration · Reliability & Risk Management · Incident Response Leadership · Security & Compliance Alignment

EDUCATION

Epitech — Bachelor of Computer Technology, 2011 – 2012

AFPA — Application Developer Degree, 2021 – 2022
