PROFILE

Production SRE with 4 years operating high-availability distributed infrastructure across regulated healthcare, crypto, and multi-protocol systems. Moving into ML platform / MLOps — bringing Kubernetes reliability, observability, and cost-aware platform operations to the platform that builds, ships, and serves models.

EXPERIENCE

Site Reliability Engineer — Kiln Jun 2024 – Jan 2026

- Operated high-availability distributed infrastructure securing $8B+ in digital assets across 40+ production networks
- Integrated 10+ distributed protocols into hybrid-cloud environments with reliability and security guarantees
- Designed and maintained Terraform IaC and Helm charts across multi-environment Kubernetes clusters
- Deployed and operated the Kubernetes platform stack — nginx ingress, Flux GitOps delivery, cert-manager TLS, Velero backup/restore — with Teleport access management, SOPS and External Secrets, and Kyverno policy enforcement
- Maintained observability with Prometheus, Grafana, OpenTelemetry, ELK, Loki, Datadog, Jaeger, and Thanos, reducing MTTR, and ran Redis, Elasticsearch, and PostgreSQL in production
- Ran blockchain node clients (Geth, Nethermind, Lighthouse, Prysm, Teku, Besu) across the 40+ production networks
- Built and optimized CI/CD pipelines and led production hardening and cross-team alignment on infrastructure constraints
- Translated infrastructure constraints into scalable architectural decisions with engineering and product teams

Site Reliability Engineer — Cometh Feb 2023 – Oct 2023

- Managed multi-zone Kubernetes clusters on GCP in production, deploying services with Helm charts and GitOps delivery
- Reduced CI build times by 60% through pipeline optimization and container standardization
- Improved system observability (Prometheus, Grafana, OpenTelemetry, ELK) and reduced MTTR
- Optimized infrastructure architecture, reducing cloud costs by 25%; led ISO 27001 security implementation and incident response
- Ran PostgreSQL, MongoDB, GCP Pub/Sub, and etcd in production
- Managed ingress and API traffic with Traefik, Kong, and HAProxy

DevOps Engineer — Docaposte Jun 2022 – Feb 2023

- Recovered and stabilized critical Kubernetes clusters in a regulated healthcare environment
- Ran on-premise clusters with bare-metal load balancing (MetalLB, HAProxy) and Cilium for networking and network policy
- Standardized and hardened infrastructure deployed via Ansible, improving CI/CD reliability in HDS-certified systems

Junior DevOps Engineer — Bitgen Dec 2021 – Apr 2022

- Containerized and deployed Ethereum services on Kubernetes, improving security and availability of blockchain infrastructure

INDEPENDENT WORK

2026 – present

- Product-idea proofs of concept in domain-specific AI assistance and orchestration
- Independent research in history and linguistics, largely AI-assisted prosopography

SKILLS & TECHNOLOGIES

Kubernetes · Helm · Terraform · nginx · HAProxy · Kong · Traefik · MetalLB · Cilium · Flux · Loki · Argo CD · Teleport · Velero · cert-manager · Kyverno · Vault · SOPS · External Secrets · GitHub Actions · Drone CI · GCP · Linux · Docker · Prometheus · Grafana · OpenTelemetry · ELK · Datadog · Jaeger · Thanos · Redis · GCP Pub/Sub · etcd · Elasticsearch · PostgreSQL · MongoDB

Distributed Systems · High Availability · Scalability · Performance Tuning · Capacity Planning · Cost Optimization · SecOps · ISO 27001 · HDS · GPU exposure

CORE COMPETENCIES

Infrastructure Strategy & Systems Thinking · Translating Infrastructure Constraints to Product & Business Teams · Cross-Functional Collaboration · Reliability & Risk Management · Incident Response Leadership · Security & Compliance Alignment

EDUCATION

Epitech — Bachelor of Computer Technology, 2011 – 2012

AFPA — Application Developer Degree, 2021 – 2022
